November 4, 2015

To whom it may concern,

The breeding program at Callicrate Cattle Co. consists of mating Angus females with Wagyu bulls, either through artificial insemination (AI) or natural breeding. A smaller purebred herd of Wagyu females is used for replacing the base herd of purebred females and for producing breeding bulls which are used for the main cow herd.

For roughly the last 13 years, procurement of breeding stock has been facilitated by leading Wagyu cattle expert, Dr. Matt Cherni. Dr. Cherni can be reached at 307-751-7882, or at Box 996, Ranchester, WY 82839.

AI services, including bull selection, have been provided by Harold Miller, 7 Triangle 7 Cattle Co., 31065 CR 41 • Akron, CO 80720, 907-481-392.

Sincerely,

Mike Callicrate
Owner
